

Bahia Escondida Marina

Hacienda Dorado Golfito, Costa Rica

Services Rendered

- Site assessments
- Review of previous engineering work and recommendations for additional work
- Preparation of bid documents, including plans and specifications
- Assistance with bid process and review of submittals
- Preparation of site plan modifications for the changing economic conditions

Project Summary

Working with local architects and engineers, ATM served as the lead engineer for all waterside activities and planning for the proposed marina for the Bahia Escondida project in Golfito, Costa Rica.

ATM developed performance specifications for floating docks and coordinated with dock manufacturers to develop cost estimates for marina construction. An upland plan for haulout and dry storage capabilities was also developed.

Recommendations for modifications to the marina slip mix were made to best accommodate predicted market.

ATM prepared contract plans and specifications, bid documents and assisted in the bidding process.
