

# City Engineer

## City of LaBelle, Florida

### Services Rendered

- Water and Wastewater
- Roadways
- Environmental Engineering
- Permitting Services
- Funding Assistance and Bonding

### Project Summary

ATM has served as the City's Engineer for over 15 years. During this time, we have worked on multiple projects covering a broad range of service areas. We attend all City Commission meetings and provide an engineering staff report at all the meetings. The variety of projects we have completed and our understanding of the City allow us to work as an extension of the City's staff.

ATM designed, permitted, and provided construction administration for the City's 0.75 MGD SBR wastewater treatment plant and is currently designing a new 1.5 MGD Reverse Osmosis water plant, source wells and deep injection well south of the core City to replace the existing lime softening water treatment facility. To improve water quality in the interim prior to construction of the RO plant, ATM designed upgrades at the existing WTP to provide nanofiltration to a 0.75 MGD side stream of water. ATM assisted the City in receiving Drinking Water SRF funding of \$2M for this project by preparing the Request for Inclusion, The Facilities Plan, and the construction drawings and specifications.

Permitting services were provided for a variety of projects for the City with DEP, South Florida Water Management District, and DOT.

ATM has assisted the City of LaBelle with the engineering and financing aspects of a variety of water and sewer projects. The City's 5-year Capital Improvement Program includes over \$30 million for construction of a new water treatment plant and associated facilities.

Over the years, ATM has completed many CDBG funded projects to provide water and sewer system expansion to new areas. Roadway replacement and improvement is often associated with this work.
